

Sexually Transmitted Infections Testing

Reimbursement Policy ID: RPC.0079.2400

Recent review date: 05/2024

Next review date: 03/2025

Select Health of South Carolina reimbursement policies and their resulting edits are based on guidelines from established industry sources, such as the Centers for Medicare and Medicaid Services (CMS), the American Medical Association (AMA), state and federal regulatory agencies, and medical specialty professional societies. Reimbursement policies are intended as a general reference and do not constitute a contract or other guarantee of payment. Select Health of South Carolina may use reasonable discretion in interpreting and applying its policies to services provided in a particular case and may modify its policies at any time.

In making claim payment determinations, the health plan also uses coding terminology and methodologies based on accepted industry standards, including Current Procedural Terminology (CPT); the Healthcare Common Procedure Coding System (HCPCS); and the International Classification of Diseases, 10th Revision, Clinical Modification (ICD-10-CM), and other relevant sources. Other factors that may affect payment include medical record documentation, legislative or regulatory mandates, a provider's contract, a member's eligibility in receiving covered services, submission of clean claims, and other health plan policies, and other relevant factors. These factors may supplement, modify, or in some cases supersede reimbursement policies.

This reimbursement policy applies to all health care services billed on a CMS-1500 form or its electronic equivalent, or when billed on a UB-04 form or its electronic equivalent.

Policy Overview

This policy addresses billing and reimbursement for testing of sexually transmitted infections.

Exceptions

N/A

Reimbursement Guidelines

The plan will reimburse for the following single tests for sexually transmitted infections (STIs) in men and women:

- 87491 — Chlamydia trachomatis, amplified probe technique
- 87591 — Neisseria gonorrhoea, amplified probe technique
- 87661 — Trichomonas vaginalis, amplified probe technique

When all three single test codes (87491, 87591, and 87661) are billed separately for the same provider and the same date of service, the reimbursement will be based on the rate for the comprehensive test (87801).

Sexually Transmitted Infections Testing

Procedure code 87801 is a more comprehensive, multiple organism code for infectious agent detection by nucleic acid.

- 87801 — Infectious agent detection by nucleic acid (DNA or RNA), multiple organisms; amplified probe technique(s)
